

Why Science is Sexist

– 9. Januar 2020 –

**Vortrag von Prof. Nicola Gaston
Dept. of Physics, Univ. of Auckland**

It has long been evident that the representation of men and women in the sciences is broadly unequal; if we can judge the social systems of the scientific community by their outcomes, therefore, we can clearly identify them as sexist. The question that has often not been clearly answered is why this should be the case, in a world of equal opportunity.

In this talk I will present some of the scientific literature used in writing my book (Why Science Is Sexist, Bridget Williams Books, 2015) to answer the question of why, and also discuss how we can all use the evidence of unconscious and systemic bias to make meaningful change.
